FOR IMMEDIATE RELEASE

RBH SOUND'S AWARD-WINNING SIGNATURE SERIES WELCOMES TWO NEW 'LCR' MODELS

DENVER, CO – CEDIA EXPO – SEPTEMBER 6-9, 2007 – SR-15 & BOOTH 180 – RBH Sound, a high performance home and light commercial audio products company based in Layton, Utah, introduced two new Signature Series LCR models at the CEDIA Expo in Denver, Colorado.

The new models, the 6100-SE and 6100-SE/R, are freestanding speakers designed to be used as the front left, center or right (LCR) channels in a home theater system, and can also be used for two-channel audio systems.

RBH Sound's president Roger Hassing said the introduction of these new models closely follows one of the company's primary objectives, which is to serve their dealers' needs. "We've received many requests from our dealers for a slim freestanding center channel for larger home theater systems," he said. "We've had great success with the award-winning T-1, but our dealers needed a lower-profile design. We're proud to announce not one, but two answers to these requests: the 6100-SE, and its Signature Reference cousin, the 6100-SE/R."

Hassing said RBH Sound is very excited about introducing these two models, which "integrate the high performance of the T-1 and like Signature In-wall models SI-6100 and SI-6100/R" into a freestanding design allowing for easier placement in some home theaters.

What makes these line-array designs different is that they feature four proprietary aluminum cone 6½-inch woofers and three 1-inch silk dome tweeters which produce high sound pressure levels and outstanding fidelity for larger home theaters and their demanding listeners. Due to their design, these two models can easily outperform other types of speakers when used vertically for home theaters

featuring multi-tiered seating. The 6100-SE/R incorporates reference-grade enhancements over the 6100-SE such as aluminum cone woofers with a fixed-position phase plug. The phase plug extends the frequency response these drivers are capable of reproducing, resulting in increased sonic resolution. In addition, the 6100-SE/R features reference-level tweeters that employ a larger motor structure for increased power handling and improved detail and clarity.

The 6100-SE and 6100-SE/R are built in the USA and are available in 30 beautiful, hand-finished hardwood veneers. When used horizontally, the 6100-SE and 6100-SE/R measure only 8¾-inches high and 11½-inches deep, but at 48-inches wide, they leave no doubt that they're designed for serious home theaters.

The suggested retail prices are \$3,099/each for the 6100-SE, and \$3,999/each for the 6100-SE/R. Both models are available and shipping now.
