FOR IMMEDIATE RELEASE

RBH SOUND UNVEILS NEW POWERED SUBWOOFER

ORLANDO, FL – ELECTRONIC HOUSE EXPO – MARCH 8-11, 2007 – DEMO ROOM 202A –

RBH Sound, a leading audio products manufacturer for CEDIA-centric and specialty audio dealerships, unveiled the PC-10 powered subwoofer in their demonstration room at the Electronic House Expo in Orlando, Florida March 8-10, 2007.

The latest addition to the company's popular TK series freestanding product line, the PC-10 powered subwoofer exceeds the design parameters the TK series is known for. "The TK series is designed for people who want the excellent audio performance RBH Sound is known for, but who are on a budget." said RBH Sound's President, Roger B. Hassing. "The PC-10 is a real value and thereby fits the TK Series mold perfectly; allowing these enthusiasts to get solid and accurate low frequency support for their home theaters and listening rooms without the need to take out a second mortgage."

With its black woodgrain cabinet and gloss black top, the PC-10 matches the look and feel of the other TK series models perfectly. Although the PC-10's footprint is minimally intrusive at only 13.5"H x 14.5"W x 14.5"D, it allows for the occasional need that sometimes arises to conceal the subwoofer in a listening room or home theater. The PC-10's 10-inch kraft pulp composite woofer faces towards the listening position so it can be concealed in custom cabinetry or behind a wall; a job RBH Sound custom dealerships are perfectly capable of. Don't let the subwoofer's small size fool you though; the PC-10, with its built-in 100 Watt amplifier, has the capability of belting out room-shaking, pulse-pounding bass down to an impressive 30Hz!

The suggested retail price for the PC-10 is a mere \$579.99, and it is available now.

About RBH Sound

Since 1976, RBH Sound has been designing, engineering and crafting high-performance loudspeaker systems, delivering superior acoustic reproduction at sensible prices.
