

SIGNATURE SV SERIES

REDEFINING THE WAY YOU EXPERIENCE SOUND.™

SIGNATURE SV SERIES SPEAKERS AND SUBWOOFERS

The new RBH Signature SV Series loudspeakers are the culmination of manufacturing excellence and modern styling. Over the years, the RBH Signature Series has won many awards and accolades for its outstanding performance; this new series promises to continue this tradition. Building on a foundation of pristine sound fidelity and high performance, the RBH designers and engineers have embarked on a mission to provide a world-class finish second to none. The result of their pursuit is two spectacular piano-gloss finishes. The first being a gorgeous high-gloss black and the other a stunning high-gloss South American Rosewood.

Despite the Signature SV Series' amazingly great looks, sound quality is the first and foremost priority. Incorporated into each model is RBH proprietary award-winning aluminum cone technology, and each design is optimized to perform at its absolute best. Not only are the SV Series' cabinets strong and attractive, their curved design functions to further reduce cabinet resonance, thereby increasing sound quality. Computer-optimized crossover networks featuring only the highest quality components allow the drivers to work seamlessly together to deliver a sonic presentation so real, you'll swear the artists and actors are actually there in your listening room or home theater. The new Signature SV Series combines modern technology with the tradition of handcrafted excellence that RBH Sound has become known for.

REFERENCE UPGRADE

A reference upgrade option is available for select Signature SV Series models. This option includes reference-grade components that provide even higher performance to satisfy even the most demanding audiophile. Working together with a tweaked crossover network, these high-end components extend and enhance the frequency response, resolution, and power handling of standard SV Series models. This results in an increased performance that exceeds the demands of even the most finicky listener.

SIGNATURE IN-WALL

Not all living spaces can accommodate conventional speakers and for those who wish to customize their listening and theater rooms with built-in speakers, Signature In-wall is the answer. For more information, please visit rbhsound.com.
